

S. 2037, S. 2182, Homeland Security And The Technology Sector: Hearing Before The Subcommittee On Sc

- United States, it is clear that there is scope for the use of the internet to enhance public understanding of EU matters to be developed.
22. Public service broadcasters have a clear responsibility to inform the public's understanding of EU issues. In this context, it was noted that the development of new broadcasting technologies, in particular digital terrestrial television, has the potential to provide a useful channel through which the work of European institutions, and of national institutions which interact with the EU, can be made visible to the public.
- The Role of Institutions in Encouraging Engagement with Europe**
- The Role of the European Institutions**
23. The European Commission takes the lead among the EU institutions in developing communications strategies and interacting with both the media and the public. This leadership by the Commission can lead to a public perception that the Commission is the most significant and powerful of the European institutions. In fact the decision-making and legislative power resides with the Council and Parliament. We were told of a perception among journalists that the Commission, while facilitating a constant flow of information to the media, has a tendency to control this information tightly. It can be insufficiently conscious of the stories that have real news value and of the demands on journalists in respect of deadlines.
24. In contrast, it was observed that the European Parliament is favoured by journalists as a source of news stories. Its work is more personality-focused and contains more political conflict and disagreement. The media profile of the Council of Ministers, in reality the most powerful of the EU institutions, is considered relatively poor. This may contribute to a public perception that the democratic voice of the people within the Union, expressed through their governments, is not as strong as it should be.
- "We believe in representative democracy, that is where we are coming from. That there are factories, bureaucrats or elites to such a level of nonsense. Every item of legislation can be changed or dumped by governments. It is governments which run the European Union but it took me quite a while to understand this. It is not readily recognisable, and one is not told." - Ann Cahill, Europe Correspondent, Irish Examiner.*
25. It is acknowledged within the European institutions that communication with the public cannot function on a top-down basis from Brussels. In order to encourage citizens of the EU to engage with the Union, and facilitate a sense of ownership, it is necessary for political and educational institutions at a national and local level to play a role. In particular, the promotion of engagement with the EU needs to be driven by local and national public representatives, and not left to the Union's institutions.
